Pokemon Online Management Console (1.0.0)

Allows you to manage your Pokemon Online server with a text based GUI

Official support sites: [Official Github Repo](#) - [Official Forum](#) - [Official Download Area](#)

Edit "pmc" and change the settings at the top if your Pokemon Online server is not in /root/pokemon-online.

You will need to run cpan and install these modules:

- UI::Dialog
- Term::ReadKey
- Term::ANSIScreen

You also need to have my Pokemon Online Startup Scripts and Backup Scripts installed.

I suggest you add this directory to your PATH variable so you can run this script directly and can update it and use the new version easily.
